

SITE AND SURROUNDINGS

The Unité d'Habitation is located on a hill, its context is extremely green and includes different types of vegetation. The main services are located near the city center, with a more urban character, but bigger structures for education, sports and health can be found close to the Unité. There is a bus line connecting the site with the city and the walking distances are relatively small even if, due to its position in the landscape, it can be perceived as isolated.
